Automobiles became one of the vital parts of people's life. Today more than 2000 milliard of cars have been produced. The modern automobile is not just a means of transportation; it is now our assistant, friend and sometimes even more.

Every manufacturer is trying to make a personal car that will satisfy various requirements of motorists. New safety system, navigation system, acoustic system, prestigious wheels and tires and pretty much anything else that helps the car to purchase the unique look.

One of the numbers of characteristics of a car is comfort. It is a very important requirement, especially for those who spend a lot of time by driving a car. If your car is not comfortable enough, it can be dangerous even for your health. For example, not comfortable seat can cause hemorrhoids, pain in back, neck, etc. And of course every person would like to have a comfortable salon, where they are able to relax and get pleasure from driving.

Another feature of the car is appearance of a car. For a lot of people this feature has a primary importance. Of course, everybody wants to have a prestigious, good-looking car. Nowadays automobile firms may produce cars with an incredible and cool design, so every car owner may be proud of his car.

Safety and reliability are the most important requirements nowadays. Unfortunately, there are too many accidents on the roads at present. If you go somewhere by a car, you can't be sure that this is not your last journey in the life. As for safety of a car is the most important for the most of motorists, that's why today most of automobiles are produced with seat belts and airbags, but it is still not enough. As for the safety requirements to the car, they are growing day by day.

The one of the most important problem today in automobile industry is the harm of the fuel to the environment. It is a well-known fact that automobile gas emissions are very harmful to the environment, that's why, in recent years alternative fuels are becoming more and more popular in a lot of countries.

There are different types of automobile transport that use alternative types of fuel, for example, such as electric vehicles, hybrid electric vehicles, vehicles with a flexible choice of fuel (Flexible-fuel vehicle), vehicles using liquefied natural gas, solar.

Summing it up, it is necessary to stress that the number of new requirements to cars is steadily growing. It is possible, that the requirements to cars common for us today may become obsolete in the nearest future. Automobile industry is developing fast. Every year existing developments are modernized and new ones are designed.
